

Diagram style for QuarkWave MIDI

The [current Pico–Uno connection schematic](#) is the visual baseline for documentation diagrams. The SVGs are self-contained so they render in Markdown previews and exported manuals without fonts or external assets.

Role	Color	Use
Canvas	#0b1728	Rounded dark background.
Main card	#142a3b , border #589bb5	Boards, sources, controls, and components.
Processing module	#242336 , border #ac90c7	Level shifter, audio buffer, effects, or amplifier.
Output card	#302a25 , border #d4a46d	DAC, connector, or destination.
Forward signal	#32bdd6	Normal left-to-right signal flow.
Return signal	#f5b85b	Reverse MIDI or feedback path.
Supply / reference	#b6a4d2	Power paths or supply notes; dashed when an endpoint still needs verification.
Ground	#7bd6a2	Common ground or return.
Lit matrix pixel	#ff6767	A physically illuminated Uno LED in illustrative views.
Unlit matrix pixel	#39485b	An off LED in illustrative views.

Use system fonts and a clear title, subtitle, and note area. Label every path and component directly; colors add grouping but never carry the meaning alone. Keep the main flow left to right, use short orthogonal connections, and avoid lines crossing labels or other paths. The diagram colors describe **function**, not the actual jumper colors.

Captions in the guides must say whether a drawing shows **current wiring**, a **proposed unbuilt circuit**, or an **illustrative firmware view**. Preserve component values, pad and pin names, signal direction, and grounded nodes when restyling a schematic. Each SVG should provide a `<title>` and `<desc>` for nonvisual readers and be checked at both full size and a narrower manual/page width.
